

LADYBUGS!

SUPPLIES:

1. 1 Styrofoam ball
2. 3 Black pipe cleaners
3. 2 Google eyes
4. Red and black paint
5. Scissors, pen or pencil, glue, paintbrush
6. A wooden skewer or extra paintbrush. A glass a bit taller than the skewer or paintbrush

DIRECTIONS:

1. Press a wooden skewer or paintbrush into the bottom of the styrofoam ball. This will help you paint the whole ball without getting your hands messy.
2. Paint the ball red and place in a glass that's a bit taller than the skewer to dry completely
3. Glue on the google eyes
4. Paint 4 black spots onto the ladybug's back. Place in the glass to dry completely
5. Cut 1 black pipe cleaner in half. Twist each half around a pencil to make a curly antenna. Using the pencil lead press 2 small holes into the ball where you want to put your antennae. Then press the pipe cleaners into the holes
6. Cut 2 black pipe cleaners in half. Now cut each of those pieces in half. You will have 8 pieces, but will use only 6 for the legs.
7. Using the pencil lead press 3 holes on each side of the styrofoam body for the legs. Press the pipe cleaners into the holes and bend them to make feet!
